

HCP BLS & AED

objectives

This course covers basic life support skills and includes skills for adults, children, and infants. The course includes: safety, initial assessment, recovery position, CPR, AED and choking. On courses with clinical staff we also ensure they are confident with airway management, the use of a BVM, oxygen and suction.

This course complies with the latest 2015 ERC and UK Resuscitation Council Guidelines and is aimed at Healthcare Professionals with a duty to respond.

One of the strategies our clients have adopted to support busy schedules is for us to go to their practice, the clinical staff to attend the 2 hour annual BLS & AED training and for non-clinical staff to have face to face training every third year. In the interim years, non-clinical staff can use our online BLS course to maintain a current certificate for CQC.

The content of this and all our courses has been independently certified as conforming to universally accepted Continuous Professional Development (CPD) guidelines and come with a Certified CPD Statement as well as a Certificate.
